## ROCKLABS June 2001...

### Greetings to you from Rocklabs Ltd

In our December newsletter we advised that a faster model of ROCKLABS Boyd Crusher would be in production in 2001. Features of the new Mark 3 Boyd Crusher include:

- Production increase of 200% to 400%.
- Jaw wear plate costs have been greatly reduced per sample crushed. The earlier jaw plates were bent from a tool steel plate and then hardened. The new design is cast in high chrome iron and the plate life is being reported as 5 to 10 times longer than previously.
- The new plates can be reversed from top to bottom.
- The price of the Mark 3 Boyd Crusher remains the same as the Mark 2 Model.

If you are among the more than one hundred users of the Mark 2 Boyd Crusher, we have up-grade kits available to convert the Mark 2 Boyd to the new Mark 3 Model. Email or phone us for prices of the conversion kits.

### MECHANISED MODULES

Over the last year about 80% of Boyd Crusher orders have also included the companion Rotary Sample Divider (RSD). This "Combo" crushes and splits in one operation, reducing operator time and minimising handling. Sample quality is also improved.

### REFERENCE MATERIAL FOR GOLD ASSAYS.

**ROCKLABS** Certificated Reference Materials are now being used in 27 countries. To keep up with the substantial increase in demand, we moved to larger premises and installed new equipment. Production has been almost doubled. The range of Reference Material has been increased by 5 new values.

Our website is constantly up-dated to ensure that customers know exactly what is available.

Best wishes

Beulah Johnson  
Export Sales Manager
